# Alzheimer's Glasses

To Alzheimer's Patients And The Blind

We Try To Help Alzheimer's Patients And The Blind To Make Their Lives Easier .

Alzheimer's

Blind

Statistics show that Egypt has 300,000 Alzheimer's patients and nearly 3 million blind people

This made talking about these people necessary to provide them with ways to help them live normally

The Idea

<u>Application:</u>

❑ The person in charge of the patient stores pictures of people and simple information about them by application on the phone.
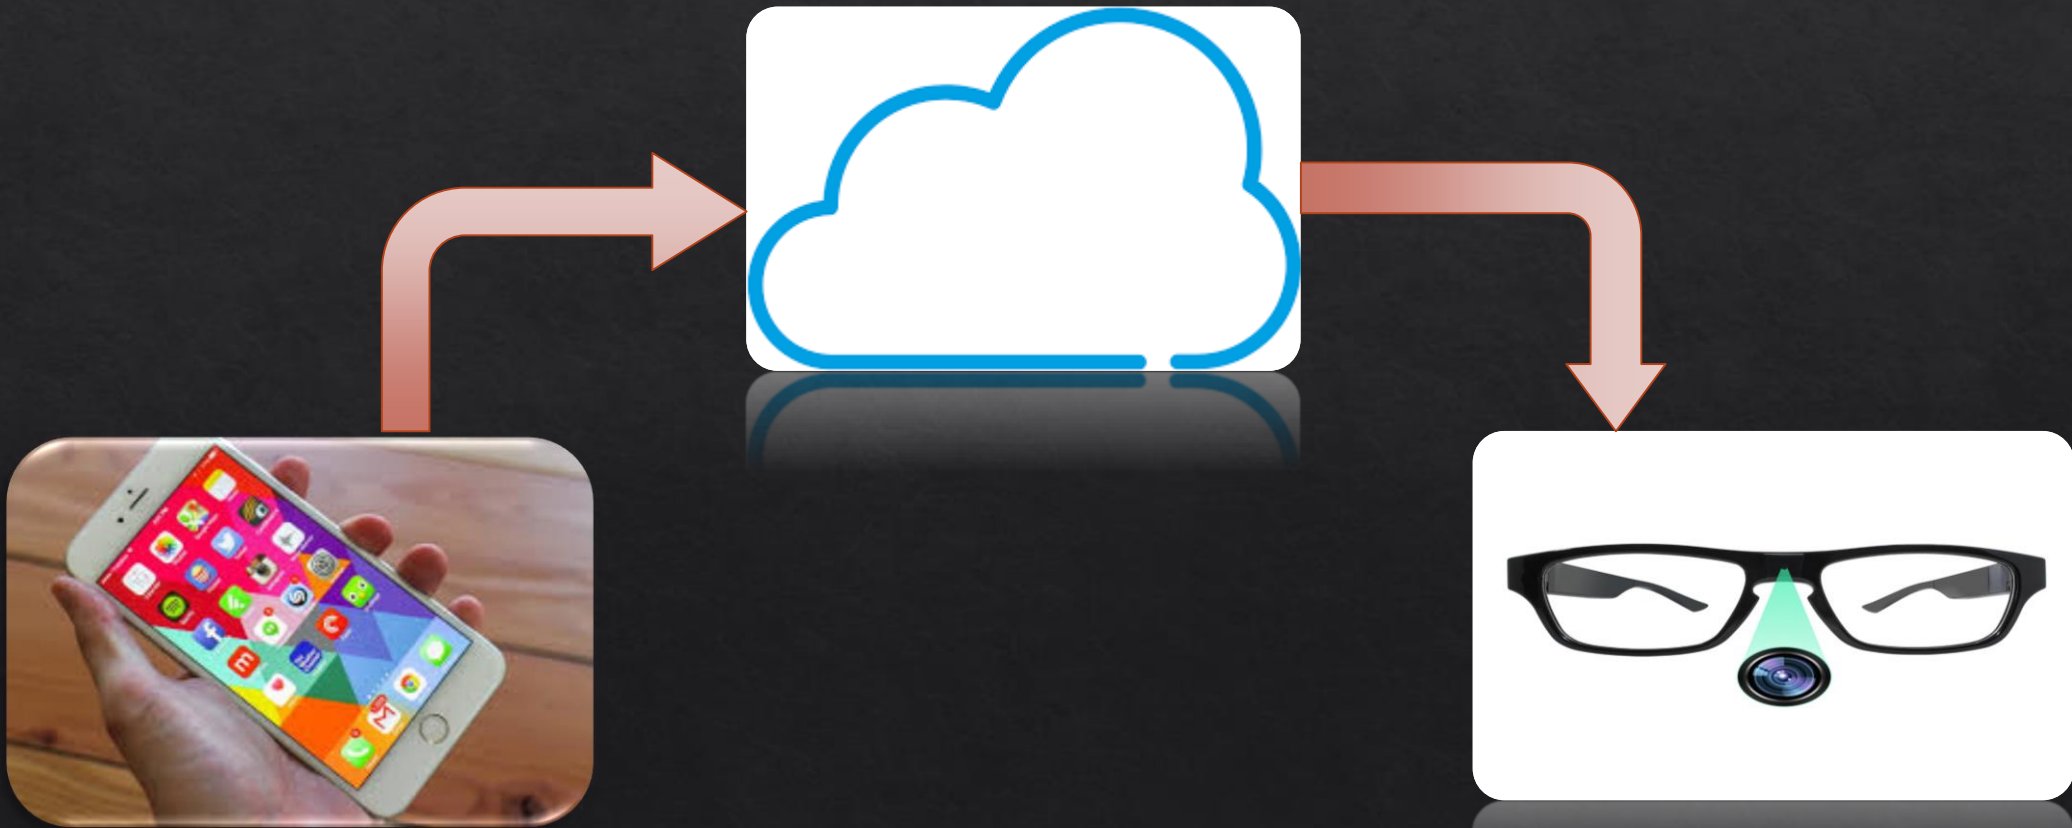

Glasses to identify the faces

❑ **we put a programmable camera in the patients' glasses can recognize the faces and compare with the pictures stored by the application and if the person is already stored in the data ,displays information about this person in :**
  - ✓ **Text on the phone**
  - ✓ **Voice in earpiece**
  - ✓ **Text on a smart watch**

❑ **We can provide GPS in any component as the client needs to know the exact location of the patient.**

Explain the idea generally

The application records data on the cloud making the data available at any time and connects the camera to use the data to compare the images stored by the application, with images taken with the camera

There is also another use of glasses, which can be used at diplomatic meetings to get to know people as soon as they see them, helping to strengthen relationships faster

THANK YOU
